

Idealist Solution Kit: GPS Tracker

Collecting and managing GPS coordinates and related data points (such as record details and survey responses) is essential functionality for organizations working in the field. Whether it be disaster recovery management, canvassing, or standard mapping, GPS coordinates can tell you the specific location of where data was collected. With a standard mobile device you will be able to map where you are when you post specific data related to those coordinates. Using Salesforce1, this information will be posted to a Salesforce.com record where you can report and manage with ease. Optionally, you can collect a signature on site from your constituents/customers and store it in Salesforce using DocuSign for Salesforce1.

Features

- Ability to track GPS coordinates from any mobile device
- Ability to access and update Salesforce.com records in the field via a mobile device
- Ability to gather relevant data points and information on site
- Ability to collect and associate GPS coordinates with data collected on site
- Ability to report on data collected as they relate to GPS coordinates
- Ability to collect signatures on site while working in the field

Benefits

- Faster data entry from field to office
- Significant labor cost savings
- Increased accuracy
- Increased productivity
- Time saving for staff
- Deployable in weeks, not months.
- Faster user adoption for staff

Solutions

- Salesforce1 Mobile
- DocuSign for Salesforce1*
